Product

Rolling FX Spot are provided by NSFX Ltd, registered in Malta, Suite 124, Signature Portomaso, Vjal Portomaso, San Giljan, PTM01, Malta. Company Registration Number: C/56519 MFSA License Number: IS/56519) See www.nsfx.com for more information or contact us on +356 2317 2040 or support@nsfx.com

This document was created/last updated on 03 January 2025.

Alert

You are about to purchase a product that is not simple and may be difficult to understand.

What is this product?

Type

Rolling FX Spot is a leveraged contract entered with NSFX Limited on a bilateral basis, where the profit is to be secured or loss avoided by reference to fluctuations in an underlying currency pair, such the Euro (EUR) against the U.S. Dollar (USD), referred to as EURUSD. Visit nsfx.com for further information in relation to the underlying currency pairs available.

Objectives

The objective of trading Rolling FX Spot is to gain exposure to fluctuations (whether up or down) related to the currency pair without owning it. Your return depends on the performance (or movement) of the currency pair and the size of your position.

This product is traded on margin. Margin refers to the use of a certain amount of capital to support an investment of a larger exposure. Please note that margin trading requires extra caution, because whilst you can realize large profits if the price moves in your favour, you risk extensive losses if the price moves against you.

For each currency pair, two different margin rates apply: 1) Initial Margin is the required collateral to open a new position. The Initial Margin requirement is dependent on the currency pair traded, and 2) Maintenance Margin, required to maintain an open position, which is usually equal to 50% of the Initial Margin requirement.

For example, the Initial Margin requirement for EURUSD is 3.33% and the Maintenance Margin requirement is 1.66%. If EURUSD is trading at 1.2000 and you trade an amount of 10,000 EUR, a margin of 333 EUR (10,000 x 3.33%) is required to open a Long/Short position. To hold the position, a maintenance margin of 167 EUR (10,000 x 1.66%) is required. Maintenance Margin is used to calculate the margin utilization. If your losses exceed 100% margin utilization, then automatic margin close-out will occur, meaning that orders to close positions will be placed and existing orders will be cancelled. When trading FX Spot, Retail clients have negative balance protection on their trading account. Should your account fall into a negative balance, you will not be obliged to make additional payments – meaning losses

cannot exceed your deposits. Rolling FX Spot is an execution only product and therefore does not have a recommended holding period (RHP). FX Spot trades do not settle. Instead, open positions held at the end of a trading day are rolled forward to the next available business day. It is up to you to open and close your position, however your position will only be kept open to the extent that you have available margin.

Intended Retail Investor

Rolling FX Spot are intended for investors who have knowledge of, or experience with, leveraged products. The product would most commonly be utilised by persons who will understand how the prices are derived, the concepts of margin and leverage and want to generally gain short term exposures to financial instruments/markets; are using (trading with) money which they can afford to lose; have a diversified investment and savings portfolio; have a high-risk tolerance; and understand the impact of and risks associated with margin trading.

What are the risks and what could I get in return?

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

The risk indicator assumes that you may not be able to buy or sell your FX at the price you wanted to due to volatility of the market or you may have to buy or sell your FX at a price that significantly impacts how much you get back.

We have classified this product as 7 out of 7, which is the highest risk class. Values may fluctuate significantly in times of high volatility or market/economic uncertainty (so can generate losses rapidly); such swings are even more significant if your positions are leveraged and may also adversely affect your position. As a result, margin calls may be made quickly or frequently, and in the event of default, your positions may be closed out.

Be aware of currency risk. You may receive payments in a different currency, so the final return you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Performance scenarios

The scenarios shown illustrate how your investment could perform, but are not an exact indicator. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies. What you get will vary depending on how the market performs and how long you hold the position. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you.

The following assumptions have been used to create the scenarios:

Trade characteristics		
Description	Symbol/Equation	Value
Intrument	I	EURUSD
Opening Price	P	1.1500
Trade Size (EUR)	TS	100,000
Notional Value (USD)	$QC = P \times TS$	115000
Initial Margin	M	3.33%
Margin Requirement (EUR)	$MR = P \times TS \times M$	3330

Performance scenario (Long)			
Long Position	Closing Price	Price Change	Profit/Loss (EUR)
Stress	1.0925	-5%	-5263.16
Unfavourable	1.1270	-2%	-2040.82
Moderate	1.1558	0.5%	501.82
Favourable	1.1730	2%	1960.78

Performance scenario (Short)			
Short Position	Closing Price	Price Change	Profit/Loss (EUR)
Stress	1.2075	5%	-4761.9
Unfavourable	1.1730	2%	-1960.78
Moderate	1.14425	-0.5%	502.51
Favourable	1.1270	-2%	2040.82

The figures shown above include all the costs of the product itself. If you have been sold this product by someone else, or have a third party advising you about this product, these figures do not include any cost that you pay to them. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What happens if NSFX is unable to pay out?

If NSFX is unable to meet its financial obligations to you, you may lose the value of your investment. It should be noted that all client funds deposited with NSFX Ltd are 100% segregated from the company's funds, and, as required by MFSA, are deposited into separate bank accounts. This segregation of funds ensures clients deposits cannot be used for any purpose other than client account trading. Moreover, it should also be noted that NSFX participates in the Investor Compensation Fund for clients of Investment Firms regulated in the Republic of Malta, who will be entitled to compensation under the Investor Compensation Fund up to certain regulatory limits where we are unable to meet our duties and obligations arising from your claim.

What are the costs?

This table shows the different types of cost categories and their meaning		
One-off costs	Spread	The difference between the buy price and the sell price is called the spread. This cost is realised each time you open and close a trade.
	Currency conversion	Any cash, realised profit and losses, adjustments, fees and charges that are denominated in a currency other than the base currency of your account, will be converted to the base currency of your account and a currency conversion fee will be charged to your account.
	Minimum Commission	The minimum fee charged for the service of carrying out the transaction
Ongoing costs	Rollover Costs	A fee is charged to your account for every night that your position is held. This means the longer you hold a position, the more it costs.

How long should I hold it and can I take money out early?

There is no recommended holding period, no cancellation period and therefore no cancellation fees. You can open and close a position on a FX pair at any time during NSFX market hours.
